OBJECTIVE

Applying for a front-end developer (React.js) job position where my experiences may be utilized and strengthen my team work collaboration.

EDUCATION

Master of Science in Computer Engineering (major in Software) | MehrAstan University, Guilan, Iran, 2018 – 2020

Bachelor of Science in Computer Engineering (major in Software) | Ahrar University, Guilan, Iran, 2014-2016.

- GPA: 18.50 out of 20_ Rank

Associate of Science in Computer Engineering (major in Software) | Moein University, Guilan, Iran, 2012-2014.

- GPA: 18.20 out of 20_ Rank

PROFESSIONAL EXPERIENCE

- **Junior front-end developer**
 - I was joined Ainaki startup as a HTML and CSS developer. Ainaki was an online shop focused on glasses product with live online 3d testing.

SKILLS

- **Good in HTML and CSS**
 - Implement HTML and CSS to creating initial layout, considering responsive web design scenarios.
- **Good in git and remote git repositories (GitHub)**
 - Utilizing the git flow procedure including (branching, pull, push, standard commit) to better manage the project and code review.
- **React.js Library (Junior Level)**

- Creating single page application using react.js library, with reusable, maintainable and manageable Functional components.
- **React Hooks and component lifecycle**
 - Utilizing React Hooks with Functional component to get rid of redundancy and increasing the efficiency and clean code standards.
 - Mostly used ones are useState, useEffect, and useContext.
- **Call the server and working with API**
 - Call the server with all the type of APIs to send request, analyze response and handle all errors in the efficient way to display on the client-side.
 - Push, get and delete data from API
- **Formik Library**
 - As all the applications required authentication and authorization, getting data from user, validate, handle and send data to the server; the formik library is the most powerfull library to handle all these requirements.
- **npm**
 - Taking advantage of node package manager in react.js / next.js projects to implement famous react libraries. Some of them includes react-select and etc.
- **Redux**
 - Do some exercise project with redux for managing and centralizing application state.

	PORTFOLIO
--	------------------

- **Tapsi demo**
 - Implement by HTML, CSS and Javascript. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Product management**
 - This app is like a simple online shopping cart which you can filter, search, sort and add or remove item. Implement by HTML, CSS and React.js . In this project I used React Context for state management and implemented search and filter component. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Simple SPA website**
 - This app is a simple project about single page application in React. Implement by HTML, CSS and React.js . In this project I used React Router Dom library. You can see live in this [link](#) and also see source code on [Github](#).
- **Todolist app**
 - This app is a project you can add some your daily work and manage it. Implement by HTML, CSS and React.js . In this project I used React select to better control on select element and implemented search and filter component. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).

- **Expesne tracker app**
 - This app is a project which allows you to monitor and categorize your expenses. Implement by HTML, CSS and React.js . This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Comments app**
 - This app is a project which you can see all comments, add comment and remove comment. Implement by HTML, CSS and React.js . In this project I used json API for data and I working with Axios library for post and get data from the json data. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Contact list app**
 - This app is a project which you can see all your contacts and you can add, edit and remove contact. Implement by HTML, CSS and React.js . In this project I used json API for data and I working with Axios library for post and get data from the json data and also i used react router dom. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Formik React app**
 - This app is an exercise project which implement Formik React. Implement by HTML, CSS and React.js . In this project I used Formik to better validation and handling submission. This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Exercise Redux**
 - This app is an exercise project which implement Redux. Implement by HTML, CSS and React.js . You can see source code on [Github](#).
- **Shopping app**
 - This app is a project which user can see some products, sign up, login and add products to cart also manage cart . Implement by HTML, CSS and React.js . In this project I used json API for data and mongo db test on localhost. I working with Axios library for post and get data from the json data also i used react router dom and context . This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
- **Resturant app**
 - In this app, the main page of a restaurant site has been implemented. Implement by HTML, CSS and React.js . This project has been implemented in a responsive design. You can see live in this [link](#) and also see source code on [Github](#).
